Calculation for Academic Performance Measure

Each data element below has a designated factor value to determine the contribution of that data element's performance measure. The points earned for each data element are calculated by multiplying the performance measure by the factor value. All earned points are then added to determine the total number of points earned. The total number of points earned is then divided by the total number of possible points for the school's calculated score. Additional credit is given for advanced achievement to determine a final score. If a school does not have a performance measure for a data element, that data element is removed from the calculation thereby not impacting the calculated score.
